

FLIR updates Latitude VMS

FLIR Systems announced the latest update to its Latitude video management software (VMS). The new version (7.0.0.5758) integrates FLIR's industry-leading thermal security cameras, and now provides support for large sites up to ten thousand security cameras on a single directory.

Designed for corporations and organizations from entry-level to enterprise, Latitude is the market's only VMS system to offer integration for both visible and thermal camera and has an open-platform design that allows for the integration of hundreds of third-party technologies.

The Latitude 7.0.0.5758 update include support of FLIR thermal cameras, including the FC-ID with built-in analytics, support for FLIR recorders to view, query and playback videos, support for pan/tilt zoom (PTZ) tracking, cell based motion detection support for FLIR Quasar cameras and support for 1080p Resolution with Quasar Quad HD Camera.

"The latest Latitude offers support for large critical infrastructure and a massive range of cameras systems," said John Distelzweig, Vice President and General Manager of FLIR's Security segment. "In addition, we're excited to now deliver seamless integration of our FLIR thermal cameras with Latitude to make it the industry's most comprehensive perimeter security protection system."

TransSys to showcase Oracle Cloud Solutions

TransSys Solutions, a leading regional IT services and solution provider, announced its participation at the GITEX Technology Week 2016, to be held at the Dubai World Trade Center, from October 16-20, 2016. The company will be showcasing its cloud-based solutions and services portfolio that would offer significant value to organisations in the region.

With a primary focus on its Oracle Cloud solutions portfolio, TransSys will be highlighting its service offerings around Software-as-a-Service (SaaS), Platform-as-a-Service (PaaS) and Infrastructure-as-a-Service (IaaS) solutions. TransSys has built PaaS for SaaS extensions across industry verticals to help clients quickly adopt to Oracle's Cloud platform, in addition to offering specific solution accelerators.

"GITEX is the region's premier ICT event and an ideal platform for TransSys to showcase itself as a regional services and solution provider helping companies across airlines, banks, insurance, retail, real estate, semi-government and telecom sectors, transform and transition their businesses to the cloud model," said Prabu Balasubramanian, Executive Director, TransSys Solutions.

A10 Networks to demo Solution Delivering Application and Security Services

A10 Networks has announced its participation at GITEX Technology Week 2016 where it will showcase the company's A10 Harmony solution architecture. The first of its kind solution empowers businesses to deliver secure application services across traditional data centres, private, public and hybrid clouds, helping them become more secure, responsive and operationally agile as they bridge traditional and cloud-based application environments.

Henk Jan Spanjaard, vice president of EMEA Sales at A10 Networks says, "A10 Harmony was an architecture introduced in early 2015 that lays the foundation of a rapid services integration platform for enterprise, cloud, and service provider networks. With A10 Harmony, developers can integrate intelligent application networking services more easily with high-performance A10 Thunder Series Application Delivery Controllers (ADCs). Our recent acquisition of Appcito, a multi-cloud application delivery expert, adds to A10 Networks' existing momentum around providing secure application service solutions that meet several key demands. These demands include application analytics, visibility, and centralized control."

"Gitex provides us the ideal platform to meet with CIOs and IT managers and discuss this revolutionary architecture that will help enterprises become both 'cloud-ready' and 'cloud-native.'"

UNIFY

Welcome to a Unified World

Born out of the engineering DNA of Siemens, Unify builds on this heritage of product reliability, innovation, open standards and security to provide integrated communications solutions for approximately 75% of the Fortune Global 500 across 60 countries.
